

WTC 500 | WTC 700

The compact all-rounder in water purification

Benefits

- Retention of particles, microorganisms and viruses
- Retention of salts and chemicals
- Intuitive, easy operating
- Integrated handles for convenient movement by persons
- Available as self-sufficient system with generator and trailer

General description

The WTC 500 | 700 water purification system is the successor to the well-known WTC 500 RO. This new all-rounder is the perfect companion when it's not clear before the operation whether fresh, salt or chemically contaminated water should be purified.

The system is built using the highest quality materials and industry approved components, resulting in its extreme reliability. The user interface stands out due to its clear and systematic set-up, which allows faster and intuitive operation. Thanks to its integrated handles, the system can be manually carried through rough terrain to the water source. The system has been designed for minimal chemical consumption.

All surfaces which come into contact with drinking water have been selected following internationally accepted regulations (e.g., DVGW, FDA), enabling the treatment of drinking water according to the WHO quality guidelines.

Technical data

Dimensions (L x W x H) mm	1.200 x 800 x 900 ca. 4.400 x 4.280 x 2.070 (incl. Trailer)
Total weight (Empty, kg)	ca. 160 175 ca. 1.700 (incl. Trailer)
Drinking water yield per hour	up to 500 700 l
